Side hung max height 1400mm  
Top hung max width 1400mm  
Top hung max height 1400mm

**Art Deco and Bauhaus are complimentary styles of product design that flourished across the world in the 1920s and 1930s. These movements have influenced the design of buildings, bridges, ocean liners, furniture, and everyday objects like the wireless and vacuum cleaners.**

Art Deco got its name from the 1925 International Exhibition of Modern Decorative and Industrial Arts in Paris. Art Deco combined modern styles with fine craftsmanship and rich materials. During its heyday, it represented luxury, glamour, exuberance and faith in social and technological progress. The Empire State Building, Chrysler Building, and other skyscrapers of New York City built during the 1920s and 1930s are monuments to the style. At that 1925 Exposition, architect Le Corbusier wrote that practical objects such as furniture (or windows) should not have any decoration at all; his conclusion was that "Modern decoration has no decoration"

The Bauhaus architectural movement seamlessly dovetails with Art Deco, because it champions synthesized fine arts, crafts, design, architecture and technology. Promoting rational, functional design that embraces a 'form follows function', 'less is more ethos', born in the immediate aftermath of WW1.

Bauhaus Architectural Limited is proud to be bringing these fabulous design concepts back to life, through the medium of high-specification aluminium.
